

## News Release

**Headline:** The Southwest Clean Air Agency, in conjunction with Oregon DEQ, issues an air quality advisory for smog in Clark County and surrounding Portland Metro area.

**Release Date:** Friday, June 25, 2021

Along with extreme temperatures this weekend, we are expecting elevated levels of ozone pollution (smog) for the Portland-Vancouver area. Ozone levels are expected to reach the UNHEALTHY FOR SENSITIVE GROUPS Saturday through Monday (June 26-28) as the region is under the influence of the extreme heat. Health officials recommend sensitive groups limit outdoor activity when pollution levels are elevated.

The Air Quality Index rates air quality based on labels of “good” (0 to 50, green), “moderate” (51 to 100, yellow), “unhealthy for sensitive groups” (101-150, orange), and “unhealthy” (151-200, red), and “very unhealthy” (201 to 300, deep red). Any reading above 300 is “hazardous.” Ozone levels are expected to increase into the “unhealthy for sensitive groups” range at several locations in the Vancouver metropolitan area.

The advisory simply means that local residents are urged to protect their health and help improve air quality by reducing pollution from cars, mowers, paint and aerosol sprays. Commuters should consider taking public transportation or carpooling instead of driving, if possible. Smog-sensitive people should limit outdoor activities. This group includes older adults, children and people suffering from asthma or lung disease. The Washington Department of Health offers detailed information on how residents can best deal with impacts on their homes and communities.

Pollution levels peak in the late afternoon and early evening. If you have asthma or other breathing problems, follow your health care provider’s advice. Children and the elderly and especially those people with respiratory illnesses are the most at risk of serious health effects and should limit outdoor activities.

Here are ways you can help sensitive people in your community by reducing air pollution:

- Avoid any type of burning
- Avoid unnecessary engine idling
- Refuel your vehicle during cooler evening hours
- Limit driving by combining errands or using public transportation
- Don't use gas-powered mowers and yard equipment
- Don't paint or use aerosol sprays

Businesses can help by encouraging employees to carpool, take the bus or telecommute on advisory days.

On very hot summer days pollution from cars, other gas-powered engines and smog-producing chemicals in paints and aerosol sprays can create unhealthy levels of smog. Smog irritates the eyes, nose and lungs, and contributes to breathing problems, reduced lung function and asthma.
